

Plan for tic tac toe

1. Navigate to Tic tacjs file
2. Click "start"
3. Engage in game until it is over

Test Postconditons:

1. Game should show a clear winner of tic tac toe
2. The "computer player" should feel like an actual person playing

Bugs found:

1. The computer player will always place a O in the exact same spots, no matter where the user puts their X
2. If a user puts the X in a spot where the computer usually puts theirs, it will put it elsewhere and do a lowercase o
3. The obvious winner of tic tac toe is always declared as a loser.
